**Swanson Safety Concerns Update**

Recent comments on MTB Omaha highlighted a potential safety concern created by trail maintenance.

The problem was addressed this morning by raking off loose sand and gravel that was deposited on the left hand turn around the gully next to the creek. The areas were tamped down and flagged to provide some warning as well.

Too much material may have been thrown in that area and didn't pack down well and sand and gravel was reported to be causing tire drift and potential slide out conditions. My unintentional mistake.

Please exercise caution in the gully area, all of Swanson Park is still soft and recovering from a long cold winter. Trails appear to be summer hard in many areas but this is only a crust over very damp dirt beneath.
